

Instructions for use

Absorbin-V absorbent and odour binder

Application

Absorbin-V

- Floor cleaning (house and yard)
- Suitable for cellar, hobby room, workshop, street, courtyard paving, garage floors
- Suitable for tiled and synthetic floors
- Non-slip, suitable for traffic areas
- Ideal for dry cleaning of oily equipment
- Simply sprinkle over badly smelling substances, odours are not released again.
- Absorbin-V can be used as a plant granulate and moisture stabiliser.
- In flower boxes: Pour granulate on the bottom of the flower box and fill up with potting soil. Water is bound or released depending on the water requirements of the plants.

How it works

Absorbin-V

Oil stains happen quickly, whether during an oil change for the car, motorbike or in the boiler room. Removing them is often very costly and time-consuming. Absorbin-V is the product for removing motor oil, heating fuel and lubricants, diesel, petrol or chemicals such as acid from the car battery.

Absorbin-V effortlessly binds liquids securely in the grain and guarantees quick and convenient disposal. The very high absorbency means less material is needed and little waste. The soil and groundwater are not polluted. The environment is protected. The incorporated liquid is not released even under the effect of great pressure.

Operation manual

Absorbin-V

In case of contamination by oil or chemicals:

1 kg Absorbin-V binds approx. 0.9 litres of oil and up to 1.5 litres of chemicals (e.g. hydrochloric acid). Simply sprinkle on, allow to act, sweep up and dispose of. The reaction time depends on the liquid to be absorbed. Repeat the procedure if any residue remains. Avoid direct skin contact with the pollutants.

Recommendation for disposal:

Disposal depends on the substance absorbed. Granulate impregnated with pollutants does not belong in household waste. Please observe the regulations of your local waste disposal company.
